

# Online Farm Ecommerce

Functional Requirements in short:

1. User will login to shop product then system should generate user details.
2. When user shops one product then system generates Order Details, Payment option, Bill(offline) and Receipt.
3. When admin login through login page system should verify admin then give grant for new modifications.
4. i.e System will open the options of 'Add new product', 'Track Orders', 'Add Task for delivery person'.
5. Through login page Staff member can easily login after system verification of id & pass To fetch data of ongoing delivery Details.

## Application Flow Architecture:

# Errors and bugs

- Exception unhandled: identity specification of primary key is not done so error to register new entries. (Ans: it was corrected by changing settings of identity specification as yes and giving root and increment value).
- Build in error. Ans :(corrected by deleting task of project and restarting Project).
- Showing invalid admin id and pin .....compile time error.
- Unhandled exception incorrect syntax near data reader.
- In shop page execution there is already open an Data reader associated with this command Which must be close first. ( Ans: dr.close() ).
- Showing only one product on usercontrol form in flowlayout panel of shop page.(Ans: changing foreach loop conditions and syntax of row entries. And added `flowLayout_ProductList.Controls.Add(p);`)
- Unhandled exception to show Order Page.(Ans: wrong sql query syntax it is corrected by writing proper query.)
